# Introduction into multilevel modelling of clustered data

**Facilitator**

Prof. Martin Röösli  
Swiss TPH, University of Basel

**Description**

Real data are often clustered such as repeated measurements on the same subject or measurements in grouped subjects (e.g. family or school studies). Failure to allow for clustering results in erroneous standard errors and confidence intervals. The aim of the course is to provide participants with an understanding of the basic concepts and general techniques in the analysis of clustered data. Valid analysis methods appropriate for clustered data will be introduced. The course software will be Stata, although R may also be used. Main concepts to be covered include: clustering, random intercept, random slope, linear and logistic random-effects models (multilevel models, mixed models, hierarchical models), robust standard errors, generalized estimating equations (GEE), modelling strategy, model diagnostics.

**Objectives**

By the end of the course participants will be able to define the appropriate analysis method for a clustered data set. Participants will be able to perform and evaluate own analyses of clustered data.

**Dates**

30 June – 02 July 2021

**Eligibility**

The course is aimed at clinicians, researchers, public health specialists and other health care professionals who want to perform analyses of data with clustered structures. This is an advanced statistical course. Participants should know the principals of linear and logistic regression modelling and practical experience with linear regression analysis is required. Basic knowledge of Stata is needed.

**Course**

This is a statistical methods course. We will follow a nonmathematical
**Structure**
approach and focus on the practical application of the techniques on datasets from epidemiology and prevention research. The course consists of interactive lectures and computer practicals. You have to bring the own laptop to the course (Stata has to be installed.) We will conclude with a workshop discussing your own data.

**Assessment**
Written exam

**Credits**
1 ECTS
Preparation Work: 4 h, Contact: 24 h, Follow Up: 2 h
(1 ECTS corresponds to appr. 25-30 hours workload)

**Location**
University of Basel, details will be announced

**Course Fees**
- SSPH+ PhD Students: 30.- CHF (processing fee)
- PPHS PhD Students: 30.- CHF (processing fee)
- External MD/PhD Students: 300.- CHF
- External Academics: 850.- CHF
- Other Participants: 1250.- CHF
(The cost scheme depends on the Number of ECTS. Per ECTS participants are asked to pay 300.- CHF, 850.- CHF or 1250.-CHF, respectively)
