Missing data in observational epidemiologic studies including non-detects

Facilitators
Prof. Martin Röösli, Head of the Environmental Exposures and Health Unit Swiss TPH, Basel
Dr. Jan Hattendorf, Swiss TPH, Basel

Description
Missing data are common in real datasets. Most often data are not missing randomly. Also, non-participation and loss to follow-up are in fact (not-random) missing data problems, which can severely compromise a study's validity. Another form of not-random missing data are measurement values which are below the detection limit of a measurement device or diagnostic tool, which results in censored observations of low values.

Failure to adequately deal with missing data produces biased results. The aim of the course is to provide participants with an understanding of the basic concepts and general techniques for dealing with missing data. The course software will be R. Main concepts to be covered include: imputation techniques for missing data, dealing with selection bias and lost to follow-up from the perspective of "missing data", censoring of data, analysis of data with measurements below the detection limit, tobit regression and statistical tests with censored data.

Objectives
By the end of the course, participants will be able to adequately deal with missing data. Participants will be able to perform and evaluate own analyses of missing data.

Dates
07 - 09 September 2022

Eligibility
This course is aimed at SSPH+ PhD students, clinicians, researchers, public health specialists and other health care professionals who want to perform epidemiological data analyses. This is an advanced statistical course. Participants should know the principals of linear and logistic regression modelling and practical experience with linear regression analysis is required. Knowledge of the statistical software R is needed (see also PhD course introduction to R).
Course Structure
This is a statistical methods course. We will follow a non-mathematical approach and focus on the practical application of the techniques on datasets from epidemiology and prevention research. The course consists of interactive lectures and computer practicals. You have to bring your own laptop to the course (R has to be installed.) We will conclude with a question and answer session and an exam.

Assessment
Written exam

Credits
1 ECTS
Preparation Work: 4 h, Contact: 24 h, Follow Up: 2 h
(1 ECTS corresponds to approx. 30 hours' work)

Location
Basel, details will be announced

Course Fees
SSPH+ PhD Students 30.- CHF
PPHS PhD Students 30.- CHF
External MD/PhD Students 300.- CHF
External Academics 850.- CHF
Others 1250.- CHF
(The cost scheme depends on the Number of ECTS. Per ECTS participants are asked to pay 300.- CHF, 850.- CHF or 1250.-CHF, respectively)
